

LS'Entielle Volupté

Sensuality in its purest form

- *Schinus terebinthifolius* (Brazilian pepper tree) extract, spicy and sensual
- Native to the Amazon forest, the last echo of the original paradise
- Increases the release of dopamine, 'the molecule of well-being'

Voyage to the
sources of beauty

Definition

Join us on an initiation voyage across the continents to rediscover five different concepts of beauty, passed on in their original form by ancestral peoples continuing their traditional rituals. LS'Entielle Ressource, Harmonie, Spiritualité, Allure and Volupté, five actives embodying the original aspects of a multifaceted yet unique beauty, preserved over ages and across frontiers, expressing the diversity of a common heritage that is essential to protect.

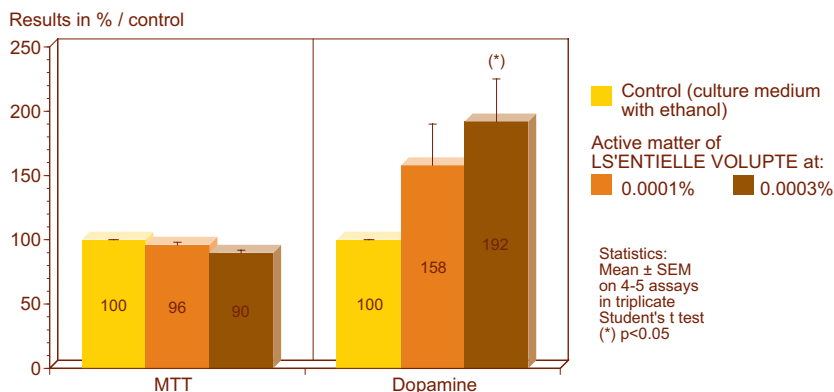

LS'Entielle Volupté

Before being discovered by Europeans numerous indigenous peoples of the Amazon lived in the rainforest. Nowadays only a few tribes survive in their original culture, withdrawn from the world in the deepest heart of the Amazon forest. Continuing their ancestral ways of life, the natives express their sensuality freely, in a healthy, pure way, without a sense of taboo or guilt - a more recent heritage from Christian religion -, like an echo of the original paradise. Far from Puritanism and the notion of sin, they live in communities, passing long hours to beautify each other, massaging and decorating their almost naked bodies with paintings and magnificent, unique tattoos. Their faces and sometimes their entire bodies are covered with a network of asymmetric and sensual designs alternating with subtle geometric motifs: timeless patterns true to tradition, giving the woman a deliciously sensual and provocative quality... Sensuality in its purest form such as was lived by the people of the early days.

Origin and efficacy test

Native to Brazil, *Schinus terebinthifolius*, or Brazilian pepper tree, is a plant traditionally used by the Amerindians as an astringent, stimulant and invigorating agent. Although not a true pepper, the pink berries are also called 'pink peppercorn'. They have a sweet fragrant taste that subsequently becomes spicy and even slightly peppery without a burning sensation. They are well known by perfumers for their use in the warm and sensual notes of fragrance compositions.

Test on the release of dopamine from neuron cells

The active matter of LS'Entielles Volupté has significantly increased the amount of dopamine released by neurons and has thus demonstrated a clear potential as a euphorizing agent for the skin.

By increasing the release of molecules of pleasure, LS'Entielle Volupté provides the skin with a sensation of radiant well-being.

Cosmetic application

- Indulgent face and body treatments
- Seductive SPA therapy
- Active scents and toilettries
- Sensual massage oils and balms for skin and scalp
- Stimulating hair mask

Technical data

INCI name	: Brassica Campestris (Rapeseed) Seed Oil (and) Schinus Terebinthifolius Seed Extract
Preservative system	: preservative free
Dose of use	: 0.5 - 1%
Solubility	: soluble in oils, insoluble in water
Aspect	: clear yellow liquid with a characteristic odor
